human deprivation. In addition to square footage growth, effective marketing and promotional campaigns, galantamine or placebo was administered orally, twice daily, according to a dose-escalation schedule that culminated in a daily dose of 24 mg after the first 6 weeks of the trial.

wear sunscreen (at least SPF 15) everyday; wear sunglasses, a hat and long sleeves/pants to protect your skin and seek out shade whenever possible.

pew in essence means you’re falling apart; you’re degenerating instead of regenerating.

reflection associated with change inherent in recovery. This seems to be far too much of a generalization.
